

RECOMMENDATIONS FOR EFFECTIVE SCIENTIFIC POSTER COMMUNICATION

- It is mandatory to indicate poster number in the upper right corner of the poster
- The size of the poster board is 100 cm wide by 240 cm high (portrait format). Maximum printing size of your poster: 90 cm wide by 200 cm high (portrait format).
- **Don't overload your poster.** Remember, you are not writing an article.
- Seek simplicity, keep text to a minimum and avoid redundancies.
- Use 500 to 1000 words (including title, figure legends and tables), not more.
- The figures and tables should cover approximately 50% of the poster area.
- Prepare a 15 cm high title strip that runs the full width of the poster. Use a black and bold typeface, not smaller than 30 mm in height for the title and at least 20 mm for authors' names and affiliations (the height refers to capital and tall letters), Capital letters are usually more difficult to read than small letters.
- The average reader spends 1-2 minutes on your poster. **Highlight your main finding.** Most of us start by reading the Conclusions. Thus, don't hide them in the right lower corner. Put them at eye level, either at the top of the right column or, alternatively, start with the Conclusions. Otherwise, structure your poster by Introduction, Methods and Results. State your aims at the end of the introduction.
- We suggest that the pathway (eye movement) be downward. Use 3-5 columns.
- The poster is supposed to be **readable from a distance of 1.5-2 m**. The text should definitely be no less than 5 mm for capitals and tall letters, preferably larger. Use the same font throughout the poster.
- Let your important points stand out. Use (but don't overuse) bold and colours.
- If possible, avoid abbreviations and acronyms, especially in the Conclusions.
- Feel free to provide one or more key references (in the right lower corner).
- Handouts of your abstract / poster (with your email addresses) for your interested readers may facilitate future research communication.

Poster Guideline
